

Perth

23 May

Luncheon: 12PM – 2PM

TOPIC	SPEAKER	SESSION OVERVIEW
Cyber risk is a business risk: Navigating uncertainties & mindset shifts	Ashley Watkins <i>Vice President – ANZ, Trend Micro</i>	With greater cloud adoption and autonomy within business units, cyber risk now represents one of the single largest financial risks within an organisation. The event will begin covering the latest threat landscape trends and how security leaders can build and communicate more effective, transparent, and resilient security strategies with central and correlated visibility, operationalised zero trust architectures, proactive and actionable insights into company-wide cyber risk and streamlined reporting mechanisms.
Reimagining cybersecurity and accelerating you	Shannon Murphy <i>Global Product Marketing Manager – Vision One, Trend Micro</i>	Overlapping and disconnected cybersecurity tools can be confusing and time-consuming for security teams. Limited visibility into an attacker's tactics, techniques, and procedures can result in an inadequate and incomplete response. In this session, we'll explore how an anchor cybersecurity platform can help security leaders better defend against breaches, reduce alerts, and reduce costs. Streamline security operations and reimagine what your security stack can do for you with a unified, consolidated technology approach.
Take charge of your risks: Framework for effective attack surface management	Andrew Philp <i>ANZ Platform Strategy Lead, Trend Micro</i>	Your organisation needs to move rapidly, but the speed of innovation and expanding attack surface has introduced new and more cybersecurity risk. What's the solution? Trend Micro's framework for effective attack surface risk management evaluates security gaps from the perspective of an adversary, leveling the playing field for organisations to protect themselves against risk across people, processes, and technology. In this session, we will explore how organisations can upgrade risk management strategies to adopt a proactive security approach, improve security posture, and avoid costly attacks.
Accelerating SOC: The nexus of XDR and attack surface risk management	Mick McCluney <i>ANZ Technical Director, Trend Micro</i>	SOC and security teams need central visibility to proactively improve security posture, detect and respond faster, track and benchmark risk, and optimise overall security and IT operations. Trend Micro offers a single source of truth to manage both XDR and attack surface risk management needs concurrently, leveraging the broadest native sensor coverage in the market. The results? Earlier, more precise risk remediation and threat response. In this session, we'll explore how security and SOC analysts, threat hunters, IT operations, and senior security leaders can work across borders to drive greater security outcomes, improve security outcomes with managed XDR services, enhance the analyst experience, gain operational efficiencies, and improve key performance indicators including cyber risk score and mean time to detect, respond, and patch.

TOPIC	SPEAKER	SESSION OVERVIEW
Secure your cloud transformation journey at every phase	<i>Byron Pogson</i> <i>Senior Security Solutions Architect, Amazon Web Services (AWS)</i> <i>Andrew McLellan</i> <i>ANZ Director of Cloud, Trend Micro</i>	<p>Whether you are starting an initial migration or are fully cloud-native, Trend Micro understands and protects your entire cloud journey.</p> <p>In this session, you will learn how security can help your business realize the full value of the cloud. Gain a deep understanding of threats that may be introduced based on your cloud resources, learn how to minimise security gaps as developers continue to adopt more cloud services, and break down internal silos with a single cloud security platform to increase your security resilience.</p>
Fireside chat: Featured customer accelerates risk management with Trend One	<i>Peter Ferguson</i> <i>Executive Manager Information and Communication Technology, City of Vincent</i>	<p>This fireside chat will summarise the event with a discussion about the challenges and opportunities of accelerating cybersecurity risk management in today's evolving digital landscape. The discussion will cover a range of topics, including the latest threats and vulnerabilities facing organisations, best practices for identifying and mitigating risks, and strategies for building a more resilient cybersecurity posture.</p> <p>The conversation will also delve into the impact of emerging attack surfaces and the technologies that can help enhance risk management. The goal of the discussion is to share success stories and provide practical insights and actionable advice for organisations that want to stay ahead of the curve in protecting their digital assets and safeguarding sensitive information.</p>
