## TREND MICRO XDR FOR USERS

A complete SaaS solution that provides protection, detection, and response across endpoints and emails

ADVANCED THREAT PROTECTION	XDR - CONSOLIDATED DETECTION, INVESTIGATION, AND RESPONSE
<ul style="list-style-type: none"> <li>• <b>Endpoints:</b> Apex One SaaS leverages a blend of modern threat techniques to provide the broadest protection against all types of threats.</li> <li>• <b>Email applications:</b> Cloud App Security is a cloud-based advanced threat protection service that secures email and cloud file sharing in Microsoft® 365™, Gmail™, Box, Dropbox™, and Google Drive™, catching millions of threats not found by upstream native email protection or third-party gateway services.</li> </ul>	<ul style="list-style-type: none"> <li>• Cross-layer detection and response for more insightful investigations and a quicker response to endpoint and email phishing incidents.</li> <li>• Built-in security analytics combined with global threat intelligence to detect more.</li> <li>• Trend Micro XDR: One platform to respond faster with less resources. Endpoint and email activity data (i.e. endpoint telemetry, email metadata, etc.), and detection logs are sent to the Trend Micro XDR data lake for attack discovery and analysis. This allows security analysts to identify where an attack started and search inboxes to detect the spread of the attack.</li> </ul>
