

Spiralling out of control

Trend Micro research reveals struggle to control cyber risks against mounting digital attack surfaces.

Surface states

73%

of global organizations are worried about their growing attack surface

43%

admit it is

"spiralling out of control"

37%

said it is

"constantly evolving and messy"

Low visibility

62%

said their organizations have blind spots that hamper security

On average, respondents estimated having just

62%

visibility of their attack surface

65%

claimed that being an international enterprise makes managing the attack surface harder

Yet

24%

are still mapping their systems manually

Inadequate assessments

46%

of global organizations believe their method of assessing risk exposure is sophisticated enough

Only

45%

have completely defined how they do so

35%

review/update their exposure on a monthly basis or less

Faced with ever-expanding attack surfaces, organizations need to focus on unifying their cybersecurity platform.
